

General Contract Services – UV Curing

January 2, 2020

Training and Education – UV training programs customized by content and length to meet the specific needs of clients. Topics include curing fundamentals; electrode arc, microwave, and LED curing systems; applications; state of UV LED applications; sourcing equipment; matching UV systems to the needs of the process; system maintenance; ROI calculations; energy calculations; process windows; navigating the industry supply chain; understanding how commercial UV LED systems differ from one another, and more. Training can be offered through webinars as well as in-facility and off-site.

Technical and Strategic Advising – There is considerable confusion in the marketplace regarding the state of UV LED curing, its viability, and the differences in commercial offerings. Eminence UV can serve as a technical resource to management, R&D, sales, and current and potential customers by providing unbiased information, recommendations, and technical insight across a range of industry topics and supplier offerings. Improve your development and purchasing success by working with a subject matter expert in UV technology. Services can be provided through in-person meetings and press or line trials, through phone calls or web-based video exchange, or via written report.

Applications Development – Successful UV curing applications require more than simply sourcing a lamp and formulation independent of each other. Eminence UV can provide applications expertise prior, during, and following development and integration to ensure all the variables are identified, understood, and addressed by both the formulation and UV source. Many applications have not yet been fully developed or optimized for UV LED and require working closely with formulators, UV systems suppliers, machine builders, and end users. Eminence UV has strong relationships with curing system suppliers, formulators, integrators, and press manufacturers in both digital and analog printing as well as industrial coatings.

Market Development – Eminence UV can provide insight into market structures, suppliers, users, product needs, and paths to adoption as well as be an additional resource for building relationships and opportunities with potential clients in new markets.

Product Road Mapping – Eminence UV offers guidance to suppliers in the UV LED curing market looking to understand the ongoing evolution in UV LED technology and its applications. Get the latest insights on not only what UV LED curing can do today but where it is headed. This information is essential for road mapping the future of UV LED curing systems, formulations, converting machinery, and ancillary equipment.

Commercial Content – Eminence UV can assist in messaging and content for websites, technical papers, presentations, webinars, and roadshows. We can author, co-author, and technically proof-read UV curing and applications related material as needed.

Public Speaking – Looking for a speaker for your industry event, conference, sales meeting, or executive board meeting? Eminence UV can provide speakers on a range of topics spanning UV curing technology and its applications, UV market trends, leadership, and global business trends.
